

Delta-T Devices Limited

Over the past five years PSL has been involved in the manufacture of some of the flagship products for Delta-T devices, a co-operative business based in Cambridgeshire. During that time we have formed close links with personnel in such areas as purchasing, engineering and test.

These partnerships have enabled us to take products used in soil analysis from conception to full production. During these exercises PSL has been involved in such activities as:-

- **Design for manufacture**
- **Prototype build and verification**
- **Materials procurement**
- **Pre production trials**
- **Test analysis**
- **Product pipeline fill and stock control**
- **Change request implementation**

All products are now at line balance and are supplied to a monthly schedule with little or no involvement from Delta-T.

We are now in discussions with the design community at Delta-T on aspects of design for manufacture on a new range of loggers destined to expand Delta-T's product range starting late 2009 early 2010.

Both PSL and Delta-T have benefited from the long term partnership that has developed over the last few years which has enabled both companies to better understand each others process requirements.

This working relationship has ensured that both parties have obtained and will continue to obtain the maximum financial benefits possible from product sales.
